

Use Cases: Algo 8301 Paging Adapter and Scheduler

An Algo 8301 can be used to connect an existing legacy analog paging system with NoCTel Talk. NoCTel users can then use a Poly desk phone to dial into the paging adapter for paging over the analog system.

An Algo 8301 can also be used in a hybrid deployment environment. This case uses a combination of Ploycom phones, Algo speakers, and an 8301 adaptor connecting a legacy analog system, to create a cohesive paging system that bridges old and new. This is a great option for cases that are looking to replace a dying analog system but might need to bridge a longer transition period.

The Algo 8301 includes a bell scheduling feature set, that allows users to create different bell schedules for different paging groups and then apply them to calendar dates.
